Credit Card Default Prediction

Wireframe Documentation

Shantanu Kukkar

25-07-2024

1. The first page displays the form where the user has to provide the specific details.

The wireframe shows a dark-themed web application. On the left is a sidebar with a close button (X) and a navigation menu containing 'Dashboard', 'Navigation', and 'Prediction' (the last one is highlighted with a red dot). The main content area is titled 'Thyroid Prediction Detection'. It contains several input fields: 'Type your name' (a text input), 'Select your age' (a range slider from 0 to 100 with a red dot at 40), 'Enter sex' (a dropdown menu with 'Male' selected), 'Thyroid Stimulating Hormone Level' (a range slider from 0.00 to 530.00 with a red dot at 9.0), and 'Total Thyroxine TT4' (a range slider from 2.00 to 430.00 with a red dot at 2.0).

2. After entering all the required data, when the user clicks on predict button, we will get the prediction on new page.

The wireframe shows the same sidebar as the first page. The main content area displays a series of dropdown menus for medical history: 'Thyroid surgery?' (Yes), 'I-131 radiotherapy Treatment' (Yes), 'Suspicion regarding Hyperthyroidism' (Yes), 'Suspicion regarding Hypothyroidism' (Yes), 'Lithium treatment?' (Yes), and 'Referral source' (STMW). Below these is a red 'Predict' button. Underneath the button is a green bar with the text 'Your Result is Ready'. At the bottom, it says 'Predicted Output: Negative'.

Your Result is Ready

Predicted Output: Negative
